HHCKLA Buddhist Leung Chik Wai College

6A error analysis (2025)

Student No.: 16 Name: _____ Marks: / 73

Class: 6A Date: _____ Marked date: _____

What have you learned in this chapter? _____

What can you do to improve your work next time? _____

1. Let $f(x) = x^2 + 7x + k$, where k is a constant. If $f(4) + f(-4) = 38$, find k.

   A. -6

   B. -3

   C. 3

   D. 6

(DSE-2025 PII Q08)

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

2. It is given that z varies directly as the cube of x and inversely as the square of y. When $x = 3$ and $y = 6$, $z = 3$. When $x = 5$ and $y = 2$, $z =$

A. 5.

B. 25.

C. 125.

D. 243.

(DSE-2025 PII Q12)

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

3. The perimeter of the sector OMN is 12π cm, where O is the centre of the sector OMN. If the radius of the sector OMN is 3π cm, which of the following are true?

I. The area of the sector OMN is $9\pi^2$ cm^2.

II. The perimeter of $\triangle OMN$ is less than 35 cm.

III. The angle of the sector OMN is greater than $100°$.

A. I and II only

B. I and III only

C. II and III only

D. I, II and III

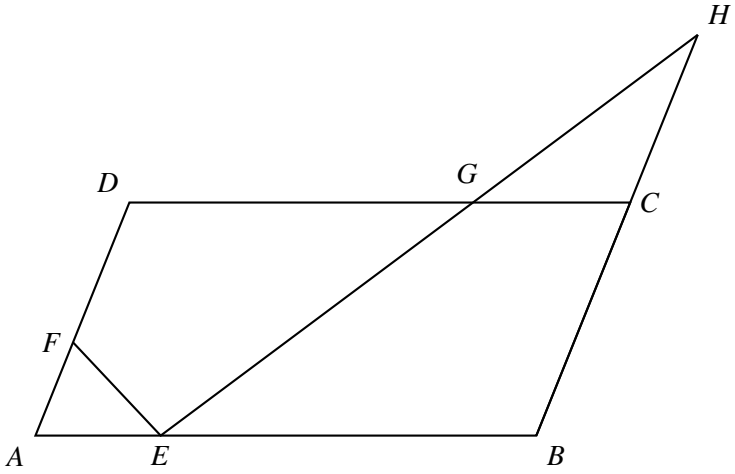

(DSE-2025 PII Q15)

Answers written in the margins will not be marked.

4. In the figure, $ABCD$ is a parallelogram. Let E, F and G be points lying on AB, AD and CD respectively such that $BE = 3AE$, $2DF = 3AF$ and $DG = 2CG$. It is given that BC produced and EG produced meet at the point H. If the area of $\triangle CGH$ is $16\,\text{cm}^2$, then the area of the quadrilateral $DFEG$ is

A. $46\,\text{cm}^2$.

B. $49\,\text{cm}^2$.

C. $105\,\text{cm}^2$.

D. $115\,\text{cm}^2$.

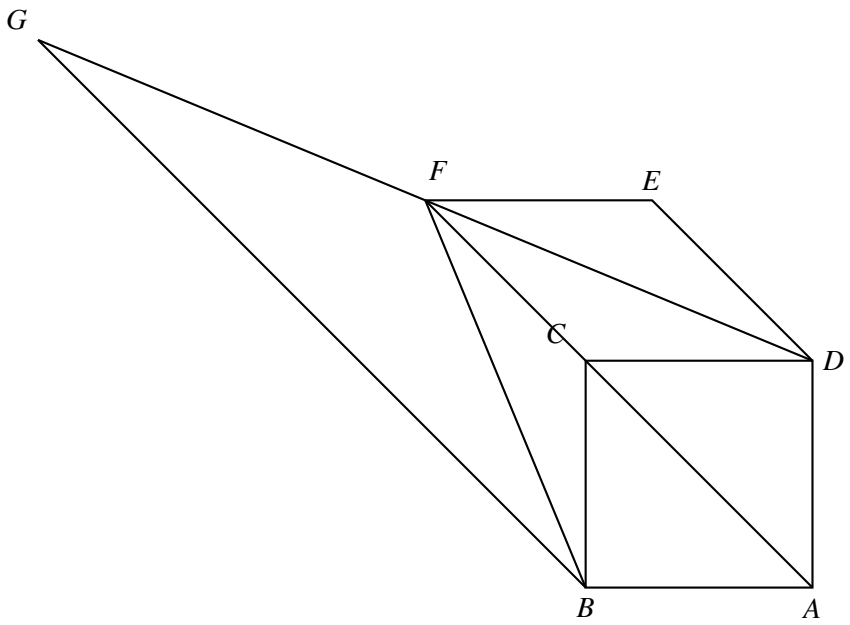

(DSE-2025 PII Q17)

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

5. In the figure, $ABCD$ is a square. Let E be a point such that $CDEF$ is a rhombus, where F is a point lying on AC produced. DF is produced to the point G such that $AF \parallel BG$. Which of the following are true?

I. $DF = FG$

II. $\triangle BFG \sim \triangle DEF$

III. $\angle ABG + \angle BFD = 180^\circ$

A. I and II only

B. I and III only

C. II and III only

D. I, II and III

(DSE-2025 PII Q19)

Answers written in the margins will not be marked.

6. The polar coordinates of the points X, Y and Z are $(1, 20^\circ)$, $(2, 80^\circ)$ and (r, θ) respectively, where $20^\circ < \theta < 80^\circ$. If $\triangle XYZ$ is an equilateral triangle, find r.

A. $\sqrt{3}$

B. $\sqrt{5}$

C. $\sqrt{7}$

D. $\sqrt{10}$

(DSE-2025 PII Q24)

Answers written in the margins will not be marked.

7. The straight lines L_1 and L_2 are perpendicular to each other. The equations of L_1 and L_2 are $3x+4y-20=0$ and $mx+ny-20=0$ respectively, where m and n are constants. Suppose that L_1 and L_2 cut the x-axis at the points A and B respectively. Let C be the point of intersection of L_1 and L_2. It is given that C lies above the x-axis. If the area of $\triangle ABC$ is 6, find n.

A. -12

B. -9

C. 9

D. 12

9. On the same rectangular coordinate system, the graph of $y = \log_a x$ cuts the graph of $y = a^x$ and the x-axis at the points P and Q respectively, where a is a positive constant. Denote the origin by O. Which of the following are true?

I. $a < 1$

II. $OQ > a$

III. $\angle POQ = 45°$

A. I and II only

B. I and III only

C. II and III only

D. I, II and III

16. It is given that a, b, c and d are four distinct real numbers. Let m_1, r_1 and v_1 be the mean, the range and the variance of the group of numbers $\{a,b,c,d\}$ respectively while m_2, r_2 and v_2 be the mean, the range and the variance of the group of numbers $\{2a,2b,2c,2d\}$ respectively. Denote the mean, the range and the variance of the group of numbers $\{a+3,b+3,c+3,d+3\}$ by m_3, r_3 and v_3 respectively. Which of the following are true?

I. $m_1+m_3>m_2$

II. $r_1+r_3=r_2$

III. $v_1+v_3<v_2$

A. I and II only

B. I and III only

C. II and III only

D. I, II and III

17. The stem-and-leaf diagram below shows the distribution of the weights (in kg) of some athletes before training.

Stem (tens)	Leaf (units)
4	5 6 8
5	w w 6 7
6	3 4 5 6 9 9
7	0 2
8	7

The difference of the range and the inter-quartile range of the above distribution is 25 kg.

(a) Write down the range of the above distribution. Hence, find w.

(b) The box-and-whisker diagram below shows the distribution of the weights (in kg) of the athletes after the training.

(i) Find the change in the upper quartile of the distribution due to the training.

(ii) Is the distribution of the weights of the athletes after the training less dispersed than that before the training? Explain your answer.

18. The height and the base radius of a solid metal right circular cone are 45 cm and 24 cm respectively. The circular cone is divided into a circular cone and a frustum X by a plane parallel to its base. It is given that the height of X is 30 cm.

(a) Express the volume of X in terms of π.

(b) Express the total surface area of X in terms of π.

(c) X is melted and recast into a solid cube. Does the total surface area of the cube exceed the total surface area of X? Explain your answer.

Answers written in the margins will not be marked.

20. Let $g(x) = 3x^2 - 6kx + 24x + 3k^2 - 24k + 55$, where k is a positive constant. Denote the vertex of the graph of $y = g(x)$ by R.

(a) Using the method of completing the square, express the coordinates of R in terms of k.

(b) The graph of $y = h(x)$ is obtained by translating the graph of $y = g(x)$ rightwards by 6 units and then downwards by 10 units. Denote the vertex of the graph of $y = h(x)$ by S. Let T be a point such that the orthocentre of $\triangle RST$ is the origin.

(i) Express the coordinates of T in terms of k.

(ii) The coordinates of the point U are $(-5, 5)$. Let V be a point lying on RS such that TV is perpendicular to RS. It is given that S, T, U and V are concyclic. Find k.

21. The equation of the straight line L is $4x-3y+83=0$. The equation of the circle C is $x^2+y^2+ax-2y+b=0$, where a and b are positive constants. It is given that C passes through the point $(-10,9)$ and L is a tangent to C.

(a) Prove that the equation $25x^2+(9a+640)x+(90a+4924)=0$ has equal roots. Hence, find a and b.

(b) The coordinates of the point P are $(-20,1)$. Let Q be a point lying below L such that PQ is tangent to C and $PQ=25$. Denote the centre of C by I.

(i) Find $\cos\angle IPQ$.

(ii) Find, in surd form, the distance between I and Q.

(iii) Let R be a point lying on L such that C is the inscribed circle of $\triangle PQR$. Denote the radius of the circumcircle of $\triangle PQR$ by r. Someone claims that $r>PQ$. Is the claim correct? Explain your answer.
