6A error analysis (2012)

Student No.: 21 Name: _____ Marks: / 45

Class: 6A Date: _____ Marked date: _____

What have you learned in this chapter? _____

What can you do to improve your work next time? _____

1. There are 132 guards in an exhibition centre consisting of 6 zones. Each zone has the same number of guards. In each zone, there are 4 more female guards than male guards. Find the number of male guards in the exhibition centre. (4 marks) (DSE-2012 PI Q05)

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

2. In Figure 1, AB, BC, CD and AD are chords of the circle. AC and BD intersect at E. It is given that $BE = 8$ cm, $CE = 20$ cm and $DE = 15$ cm.

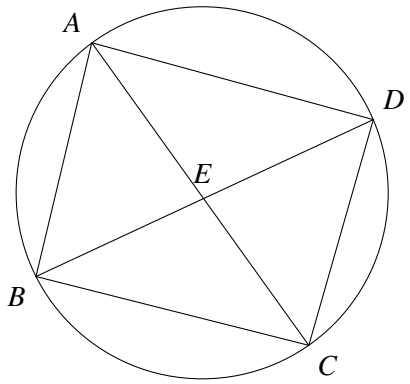

Figure 1

(a) Write down a pair of similar triangles in Figure 1. Also find AE.

(b) Suppose that $AB = 10$ cm. Are AC and BD perpendicular to each other? Explain your answer.

(5 marks) (DSE-2012 PI Q08)

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

3. Tom conducts a survey on the numbers of hours spent on doing homework in a week by secondary students. Questionnaires are sent out and twenty of them are returned. The stem-and-leaf diagram below shows the numbers of hours recorded in the twenty questionnaires:

Stem (tens)	Leaf (units)
1	0 0 1 1 2 3 4 5 5 6 6 7 7
2	0 0 0 5 8
3	4 6

(a) Find the mean and the median of the numbers of hours recorded in the twenty questionnaires.

(b) Tom receives four more questionnaires. He finds that the mean of the numbers of hours recorded in these four questionnaires is 18. It is found that the numbers of hours recorded in two of these four questionnaires are 19 and 20.

(i) Write down the mean of the numbers of hours recorded in the twenty-four questionnaires.

(ii) Is it possible that the median of the numbers of hours recorded in the twenty-four questionnaires is the same as the median found in (a)? Explain your answer.

(6 marks) (DSE-2012 PI Q10)

4. (a) Figure 3(a) shows a solid metal right circular cone of base radius 48 cm and height 96 cm.

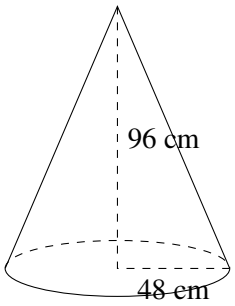

Figure 3(a)

Find the volume of the circular cone in terms of π.

(b) A hemispherical vessel of radius 60 cm is held vertically on a horizontal surface. The vessel is fully filled with milk.

(i) Find the volume of the milk in the vessel in terms of π.

(ii) The circular cone is now held vertically in the vessel as shown in Figure 3(b).

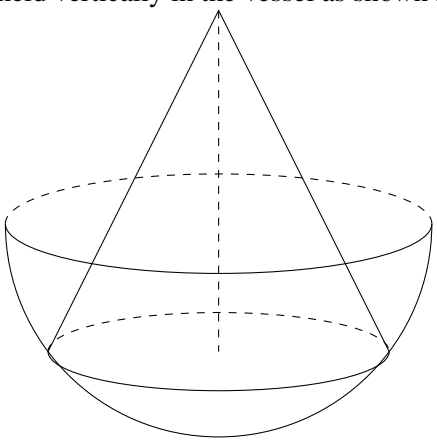

Figure 3(b)

A craftsman claims that the volume of the milk remaining in the vessel is greater than 0.3 m^3. Do you agree? Explain your answer.

(7 marks) (DSE-2012 PI Q12)

Answers written in the margins will not be marked.

5. (a) Find the value of k such that $x-2$ is a factor of $kx^3-21x^2+24x-4$.

(b) Figure 4 shows the graph of $y=15x^2-63x+72$. Q is a variable point on the graph in the first quadrant. P and R are the feet of the perpendiculars from Q to the x-axis and the y-axis respectively.

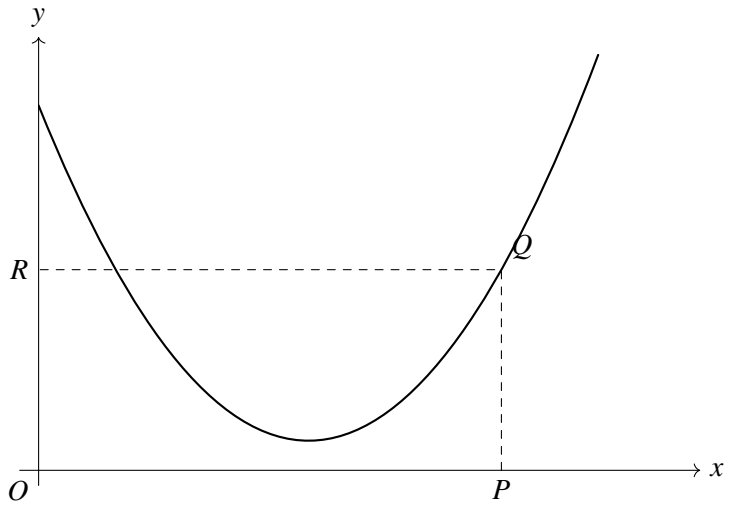

Figure 4

(i) Let $(m,0)$ be the coordinates of P. Express the area of the rectangle $OPQR$ in terms of m.

(ii) Are there three different positions of Q such that the area of the rectangle $OPQR$ is 12? Explain your answer.

(7 marks) (DSE-2012 PI Q13)

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

6. The standard deviation of the test scores obtained by a class of students in a Mathematics test is 10 marks. All the students fail in the test, so the test score of each student is adjusted such that each score is increased by 20% and then extra 5 marks are added.

(a) Find the standard deviation of the test scores after the score adjustment.

(b) Is there any change in the standard score of each student due to the score adjustment? Explain your answer.

(3 marks) (DSE-2012 PI Q15)

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

7. In a city, the air cargo terminal X of an airport handles goods of weight $A(n)$ tonnes in the nth year since the start of its operation, where n is a positive integer. It is given that $A(n) = ab^{2n}$, where a and b are positive constants. It is found that the weights of the goods handled by X in the 1st year and the 2nd year since the start of its operation are 254 100 tonnes and 307 461 tonnes respectively.

(a) (i) Find a and b. Hence find the weight of the goods handled by X in the 4th year since the start of its operation.

(ii) Express, in terms of n, the total weight of the goods handled by X in the first n years since the start of its operation.

(b) The air cargo terminal Y starts to operate since X has been operated for 4 years. Let $B(m)$ tonnes be the weight of the goods handled by Y in the mth year since the start of its operation, where m is a positive integer. It is given that $B(m) = 2ab^m$.

(i) The manager of the airport claims that after Y has been operated, the weight of the goods handled by Y is less than that handled by X in each year. Do you agree? Explain your answer.

(ii) The supervisor of the airport thinks that when the total weight of the goods handled by X and Y since the start of the operation of X exceeds 20 000 000 tonnes, new facilities should be installed to maintain the efficiency of the air cargo terminals. According to the supervisor, in which year since the start of the operation of X should the new facilities be installed?

(13 marks) (DSE-2012 PI Q19)

I can finish _____ questions
